Southern California Bungalow on which either White, Red, Green or Gray can be used with equal effectiveness

The Bungalow is a distinctive feature of Southern California, and our object in publishing this book is to show prospective home builders the beauty of this style of architecture, at the same time showing them what an important part our own products play in their construction.

Examine carefully the different roofs on the photographs and see if they don't attract you. They are RU-BER-OID and MALTHOID, made in colors of White, Red, Green and Gray. MALTHOID and RU-BER-OID show up well on any of the bungalows illustrated.

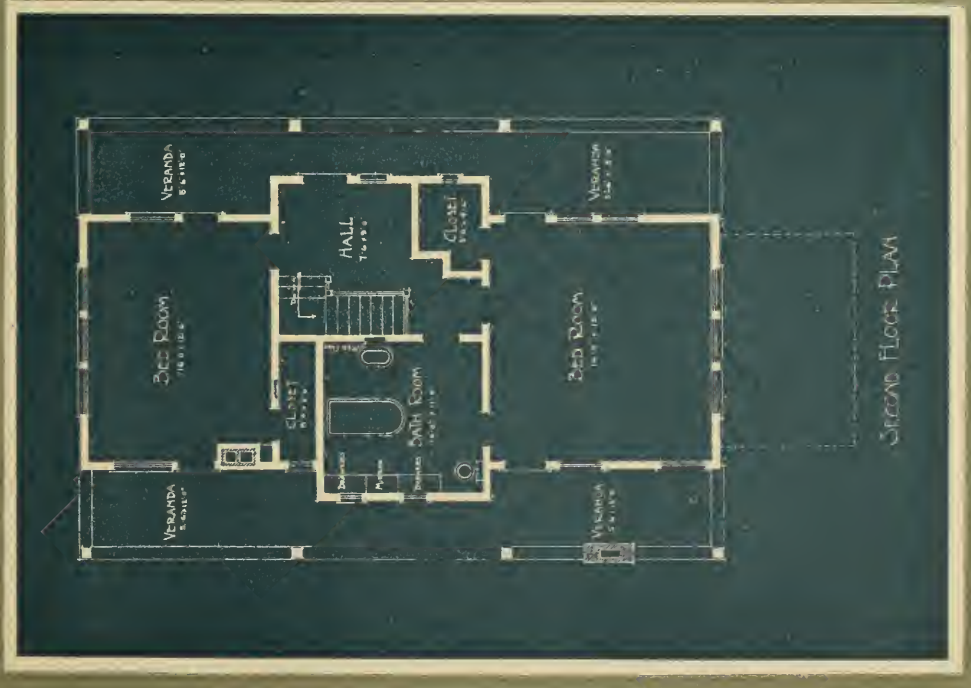
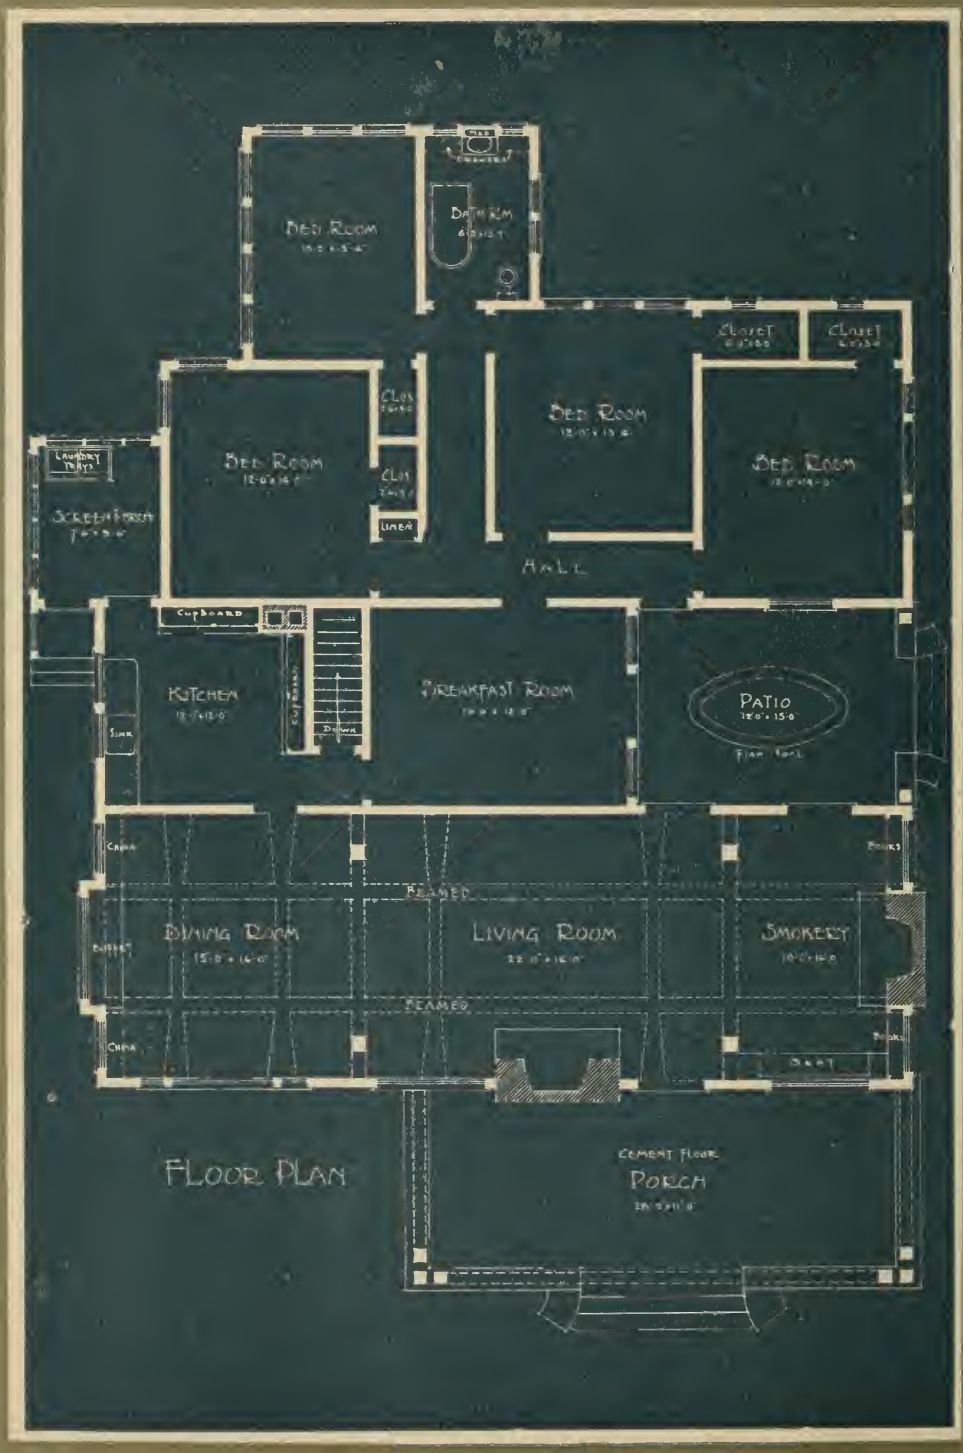
Floor Plan of First Floor



Floor Plan of Second Floor



Floor Plan of Nine Room Bungalow

Another of our products which is used in their construction is P. & B. and GIANT BUILDING PAPERS, and, by investing less than Twenty-five Dollars, you can increase the warmth of your home so materially as to practically save this amount each year in your heating bills.

If you are interested in obtaining the plans of any bungalow shown, write us. We will put you in touch with the architect who designed them. The approximate cost of each is about Thirty-five Hundred Dollars.

Front View of Nine Room Bungalow

Amiwud

The cost of these bungalows can be materially reduced and their interior beauty improved by the use of AMIWUD Wall Board, which is made to reproduce grains of popular hardwoods or plain if desired.
